Re: Notification regarding Location Restriction requirements

The existing Coal Combustion Residuals (CCR) surface impoundments at the Prairie Creek Generating Station (PCS) are subject to the Location Restriction requirements defined in 40 CFR 257.60-64. Specifically, the facility must demonstrate that the CCR units meet requirements related to placement above the uppermost aquifer [§257.60], wetlands [§257.61], fault areas [§257.62], seismic impact zones [§257.63], and unstable areas [§257.64] no later than October 17, 2018. Facilities that do not demonstrate compliance with the Location Restriction requirements must comply with the requirements of §257.101(b).

This facility did not demonstrate compliance with the Location Restrictions, and has therefore complied with the closure requirements of §257.101(b). The Notice of Intent to Close required by §257.102(g) was placed into the CCR Operating Record on November 28, 2017, and the closures were completed on December 18, 2018.

This notification applies to the following closed CCR units at this facility:

CCR Surface Impoundments

- PCS Pond 1
- PCS Pond 2
- PCS Pond 3
- PCS Pond 4
- PCS Pond 5
- PCS Pond 6
- PCS Pond 7
- PCS Discharge Pond

The closed CCR units are now managed as a single Closure Area.
