## OVERVIEW OF CURRENT STATUS

### Columbia Energy Center, Dry Ash Disposal Facility, Primary Ash Pond 2023 Annual Report

In accordance with §257.90(e)(6), this section at the beginning of the annual report provides an overview of the current status of groundwater monitoring and corrective action programs for the coal combustion residual (CCR) unit. The groundwater monitoring system for the Primary Ash Pond at the Columbia Energy Center (COL) monitors a single existing CCR unit. Supporting information is provided in the text of the annual report.

Category	Rule Requirement	Site Status
<b>Monitoring Status – Start of Year</b>	(i) At the start of the current annual reporting period, whether the CCR unit was operating under the detection monitoring program in §257.94 or the assessment monitoring program in §257.95;	Assessment
<b>Monitoring Status – End of Year</b>	(ii) At the end of the current annual reporting period, whether the CCR unit was operating under the detection monitoring program in §257.94 or the assessment monitoring program in §257.95;	Assessment
<b>Statistically Significant Increases (SSIs)</b>	(iii) If it was determined that there was an SSI over background for one or more constituents listed in Appendix III to this part pursuant to §257.94(e):  (A) Identify those constituents listed in Appendix III to this part and the names of the monitoring wells associated with such an increase; and	<u>October 2022/January 2023</u> Boron: M-4R, MW-303, MW-304, MW-305 Chloride: M-4R, MW-304, MW-305 Sulfate: M-4R, MW-303, MW-304, MW-305 Total Dissolved Solids: M-4R, MW-303 Field pH: MW-303, MW-305 <u>April 2023</u> Boron: MW-303 Field pH: MW-303 Sulfate: MW-303  <u>May 2023</u> Field pH: MW-316

Category	Rule Requirement	Site Status
	(B) Provide the date when the assessment monitoring program was initiated for the CCR unit.	July 16, 2018
<b>Statistically Significant Levels (SSL) Above Groundwater Protection Standard (GPS)</b>	(iv) If it was determined that there was an SSL above the GPS for one or more constituents listed in Appendix IV to this part pursuant to §257.95(g) include all of the following:	
	(A) Identify those constituents listed in Appendix IV to this part and the names of the monitoring wells associated with such an increase;	October 2022 Arsenic: MW-303
	(B) Provide the date when the assessment of corrective measures (ACM) was initiated for the CCR unit;	Not applicable – Alternative Source Demonstration prepared in June 2023. ACM not required
	(C) Provide the date when the public meeting was held for the ACM for the CCR unit; and	Not applicable – ACM not required
	(D) Provide the date when the ACM was completed for the CCR unit.	Not applicable – ACM not required
<b>Selection of Remedy</b>	(v) Whether a remedy was selected pursuant to §257.97 during the current annual reporting period, and if so, the date of remedy selection; and	Not applicable – Selection of remedy not required
<b>Corrective Action</b>	(vi) Whether remedial activities were initiated or are ongoing pursuant to §257.98 during the current annual reporting period.	Not applicable – Remedial activities not required

PP\_Final.docx

## **1.0 INTRODUCTION**

This 2023 Annual Groundwater Monitoring and Corrective Action Report was prepared to support compliance with the groundwater monitoring requirements of the coal combustion residuals (CCR) Rule [40 Code of Federal Regulations (CFR) 257.50-107]. Specifically, this report was prepared to fulfill the requirements of 40 CFR 257.90(e). The applicable sections of the Rule are provided below in italics, followed by applicable information relative to the 2023 Annual Groundwater Monitoring and Corrective Action Report for the CCR Units.

This report covers the period of groundwater monitoring from January 1, 2023, through December 31, 2023.

The groundwater monitoring system for the Primary Ash Pond at the Columbia Energy Center (COL) monitors a single existing CCR unit:

- COL Primary Ash Pond (existing CCR surface impoundment)

The system is designed to detect monitored constituents at the waste boundary of the Primary Ash Pond as required by 40 CFR 257.91(d). The groundwater monitoring system consists of two upgradient and four downgradient monitoring wells (**Table 1** and **Figure 2**).

In 2023, closure activities were ongoing for the Primary Ash Pond, including CCR removal facilitated by operation of dewatering wells installed around the perimeter of the pond to lower the groundwater table. Removal of CCR from the Primary Ash Pond was completed on October 4, 2023. In 2022, closure activities were completed for the adjacent Secondary Pond, including CCR removal facilitated by operation of dewatering wells installed around perimeter of the Secondary Pond to lower the groundwater table elevation.

## **2.0 BACKGROUND**

To provide context for the annual report, the following background information is provided in this section of the report, prior to the annual report requirement sections:

- Geologic and hydrogeologic setting
- CCR Rule monitoring system

### **2.1 GEOLOGIC AND HYDROGEOLOGIC SETTING**

#### **2.1.1 Regional Information**

For the purposes of groundwater monitoring, the surficial sand and gravel aquifer is considered to be the uppermost aquifer unit, as defined under 40 CFR 257.53, at the COL Primary Ash Pond.

Immediately underlying the surficial sand and gravel aquifer is the Cambrian-Ordovician sandstone aquifer. A summary of the regional hydrogeologic stratigraphy is presented in **Appendix A**.

The sand and gravel aquifer is capable of producing sufficient water for industrial or municipal use in some parts of Columbia County, and is capable of producing sufficient water for domestic use in many areas, including along the Wisconsin River near the Columbia Energy Center (Harr et. al, 1978). A map showing expected well yields within the sand and gravel aquifer in Columbia County is included in **Appendix A**.

Regional groundwater flow in the site vicinity is generally west toward the Wisconsin River. A map showing the regional water table elevations is included with the regional hydrogeologic information in **Appendix A**.

### **2.1.2 Site Information**

Soils at the site are primarily sand to a depth of approximately 50 to 100 feet and overlie sandstone bedrock. Soils encountered during the site feasibility study for the COL Ash Disposal Facility were described as generally sandy with interbedded silty clay lenses up to 20 feet thick (Warzyn, 1978). During drilling of CCR wells MW-301, MW-303, MW-304, and MW-305, the unconsolidated materials were identified as consisting primarily of silty sand and sand. Boring logs for previously-installed monitoring wells MW-84A and M-4R show silty sand and sand as the primary unconsolidated materials at these locations. The boring logs for Primary Ash Pond CCR monitoring wells are provided in **Appendix B**. All CCR monitoring wells are screened within the unconsolidated sand unit.

In the vicinity of the ash ponds, groundwater flow has historically been radially away from the ponds in all directions; however, the April 2023 water levels and apparent flow directions reflect the influence of a temporary dewatering system installed to lower groundwater levels in the area of the Primary Ash Pond as part of the closure project for that CCR Unit. The groundwater dewatering system ceased operations as of September 11, 2023, and removal of CCR from the Unit was completed on October 4, 2023. A stormwater pond was constructed in the footprint of the CCR Unit. WPL continues to evaluate the effects on groundwater elevations after removing CCR from the CCR Unit.

The water table elevations and groundwater flow directions for the April 2023 monitoring event are shown on **Figure 3**, and the water table elevations and groundwater flow directions for the October 2023 sampling are shown on **Figure 4**. The groundwater elevation data for the CCR monitoring wells are provided in **Table 3**, and horizontal gradients and flow velocities for representative flow paths are provided in **Table 4**.

## **2.2 CCR RULE MONITORING SYSTEM**

The groundwater monitoring system established in accordance with the CCR Rule consists of two upgradient (background) monitoring wells and four downgradient monitoring Wells (**Table 1** and **Figure 2**). The background wells include MW-84A and MW-301. The downgradient wells include M-4R, MW-303, MW-304, and MW-305. One new temporary supplemental monitoring well, MW-316, was installed as part of an alternative source demonstration in April 2023, discussed further in Section 3.2. Documentation of this well installation is included in **Appendix F**. The CCR Rule wells are installed in the surficial sand aquifer. Well depths range from approximately 26 to 40 feet, measured from the top of the well casing.

## **3.0 §257.90(e) ANNUAL REPORT REQUIREMENTS**

**Annual groundwater monitoring and corrective action report.** For existing CCR landfills and existing CCR surface impoundments, no later than January 31, 2018, and annually thereafter, the owner or operator must prepare an annual groundwater monitoring and corrective action report. For new CCR landfills, new CCR surface impoundments, and all lateral expansions of CCR units, the owner or operator must prepare the initial annual groundwater monitoring and corrective action report no later than January 31 of the year following the calendar year a groundwater monitoring system has been established for such CCR unit as required by this subpart, and annually thereafter. For the preceding calendar year, the annual report must document the status of the groundwater

*monitoring and corrective action program for the CCR unit, summarize key actions completed, describe any problems encountered, discuss actions to resolve the problems, and project key activities for the upcoming year. For purposes of this section, the owner or operator has prepared the annual report when the report is placed in the facility's operating record as required by §257.105(h)(1). At a minimum, the annual groundwater monitoring and corrective action report must contain the following information, to the extent available:*

### **3.1      §257.90(E)(1) SITE MAP**

*A map, aerial image, or diagram showing the CCR unit and all background (or upgradient) and downgradient monitoring wells, to include the well identification numbers, that are part of the groundwater monitoring program for the CCR unit;*

A map showing the site location is provided on **Figure 1**. A map showing the CCR unit and all background (or upgradient) and downgradient monitoring wells with identification numbers for the groundwater monitoring program is provided as **Figure 2**. Other CCR units are also shown on **Figure 2**.

### **3.2      §257.90(E)(2) MONITORING SYSTEM CHANGES**

*Identification of any monitoring wells that were installed or decommissioned during the preceding year, along with a narrative description of why those actions were taken;*

There were no changes to the certified monitoring system for the Primary Ash Pond in 2023.

One new supplemental monitoring well was installed as part of an alternative source demonstration completed in response to the determination that arsenic was at a statistically significant level above the GPS following the October 2022 monitoring event. MW-316 was installed as a temporary water table observation well to provide data on shallow groundwater flow and water quality south of the Primary Ash Pond. The Primary Ash Pond was undergoing excavation at the time of well installation as part of the closure process for the CCR Unit.

No monitoring wells in the Primary Ash Pond monitoring system were decommissioned in 2023.

### **3.3      §257.90(E)(3) SUMMARY OF SAMPLING EVENTS**

*In addition to all the monitoring data obtained under §§257.90 through 257.98, a summary including the number of groundwater samples that were collected for analysis for each background and downgradient well, the dates the samples were collected, and whether the sample was required by the detection monitoring or assessment monitoring programs;*

Four groundwater sampling events were completed for the Primary Ash Pond CCR unit in 2023. Two semiannual sampling events were completed in April 2023 and October 2023, as required by the assessment monitoring program. The October 2023 event was the first sampling event completed since removal of CCR from the CCR Unit. One additional sampling event for select parameters at monitoring well MW-304 was completed in January 2023. An additional sampling event was completed in May 2023 for select parameters at temporary supplemental monitoring well MW-316.

The January 2023 sampling event was added to the 2023 monitoring schedule to collect a sample from MW-304, which had insufficient water for sampling during the October 2022 monitoring event.

Supplemental well MW-316 was sampled in May 2023 to monitor groundwater flow and water quality south of the Primary Pond while dewatering of the CCR unit was in progress.

A summary including the number of groundwater samples that were collected for analysis for each background and downgradient well, the dates the samples were collected, and whether the sample was required by the assessment monitoring programs is included in **Table 2**.

Groundwater samples collected in the April and October 2023 sampling events were analyzed for both Appendix III and Appendix IV constituents. Groundwater samples collected during the January 2023 event were analyzed for Appendix III and Appendix IV constituents at MW-304. The groundwater sample collected from MW-316 during the May 2023 event was analyzed for arsenic.

The validation and evaluation of the April 2023 monitoring event data was completed and transmitted to Wisconsin Power and Light Company (WPL) on August 29, 2023. The January 2023 supplemental assessment monitoring event data was transmitted to WPL on May 16, 2023. The results of the May 2023 sampling were included in the Alternative Source Demonstration transmitted to WPL on June 9, 2023. The validation and evaluation of the October 2023 monitoring event data was in progress at the end of 2023 and will be transmitted to WPL in 2024; therefore, the October 2023 monitoring results and analytical report will be included in the 2024 annual report. The October 2023 groundwater elevation data is included in this report.

The sampling results for Appendix III and Appendix IV parameters in October 2022, January 2023, April 2023, and May 2023 are summarized in **Table 5**. Field parameter results for the October 2022 and January, April, and May 2023 sampling events are provided in **Table 6**. The analytical laboratory reports for October 2022 and January, April, and May 2023 are provided in **Appendix C**. Historical results for each monitoring well through May 2023 are summarized in **Appendix D**.

The October 2022 analyses for the samples collected from background wells MW-84A and MW-301 are provided in two laboratory reports: an initial report and a reanalysis report. The reanalysis only affects Appendix IV parameters. The background well samples were reanalyzed for select metals because the original results were flagged for detections in the method blank sample and/or were not consistent with historical results. The reanalysis was completed within the method holding time, the metals were not detected in the method blank, and no other flags were applied to the results. Based on the quality control review, the reanalysis results were considered to be more accurate than the original analyses.

### **3.4 §257.90(E)(4) MONITORING TRANSITION NARRATIVE**

*A narrative discussion of any transition between monitoring programs (e.g., the date and circumstances for transitioning from detection monitoring to assessment monitoring in addition to identifying the constituent(s) detected at a statistically significant increase over background levels);*

There was no monitoring program transition in 2023.

Assessment monitoring for the Primary Ash Pond was initiated in April 2018 and continued through 2023. Evaluation of the October 2022 results was completed in March 2023. Evaluation of the January 2023 results was completed in May 2023. Evaluation of the April 2023 results was completed in August 2023.

In accordance with the Unified Guidance for Statistical Analysis of Groundwater Monitoring Data at Resource Conservation and Recovery Act (RCRA) Facilities (U.S. EPA, 2009), the comparison of

assessment monitoring results to the Groundwater Protection Standards (GPS) was based on the lower confidence limit (LCL) for the arithmetic mean. The LCL evaluation was completed for each Appendix IV parameter that has been detected at a concentration exceeding the GPS in at least one sample result since assessment monitoring was initiated, which include arsenic, molybdenum, and selenium. The LCLs were calculated with Sanitas™ using historical concentrations measured since assessment monitoring began in April 2018. LCL evaluations for data collected in October 2022 and April 2023 are provided in **Appendix E**.

In the evaluation of the October 2022 monitoring event, completed in March 2023, arsenic was determined to be at an SSL above the GPS. The October 2022 arsenic and selenium results at MW-303 were higher than previous results; therefore, in addition to the LCL analysis, the arsenic and selenium results for this well were evaluated for a potential increasing trend using a Mann-Kendall analysis (**Attachment E**). Trend analysis for the arsenic and selenium results obtained since assessment monitoring was initiated indicated no significant trend for either parameter. To focus on the more recent data, Mann-Kendall trend analysis was also performed for the last eight samples for each parameter (**Attachment E**). The analysis of the last eight samples indicated a significant increasing trend for arsenic, and the lower limit for the 98-percent confidence band around the trend line exceeded the GPS. Based on these results, arsenic was determined to be at an SSL above the GPS at MW-303.

An Alternative Source Demonstration (ASD) was completed for the October 2022 event, demonstrating that sources other than the CCR unit were the likely cause of the observed concentrations of arsenic. The ASD report is provided in **Appendix F**.

Arsenic was not determined to be at an SSL about the GPS in the evaluation of the April 2023 monitoring event. No other Appendix IV parameters were detected at SSLs above the GPS values established under §257.95(h).

As shown in **Table 5**, several Appendix III and Appendix IV parameters continue to be detected at levels that represent statistically significant increases (SSIs) above background. Based on these results, the Primary Ash Pond will continue in the assessment monitoring program.

The comparison to background was based on a prediction limit approach, comparing the results to interwell upper prediction limits (UPLs) based on background monitoring results from the upgradient wells (MW-84A and MW-301). The interwell UPLs were most recently updated in January 2020 using background data collected through October 2019. The January 2020 Statistical Analysis was included as an appendix in the 2021 Annual Groundwater Monitoring Report.

### **3.5 §257.90(E)(5) OTHER REQUIREMENTS**

*Other information required to be included in the annual report as specified in §§257.90 through 257.98.*

Additional potentially applicable requirements for the annual report, and the location of the requirement within the Rule, are provided in the following sections. For each cited section of the Rule, the portion referencing the annual report requirement is provided below in italics, followed by applicable information relative to the 2023 Annual Groundwater Monitoring and Corrective Action Report for the CCR Unit.

### **3.5.1 §257.90(e) General Requirements**

*For the preceding calendar year, the annual report must document the status of the groundwater monitoring and corrective action program for the CCR unit, summarize key actions completed, describe any problems encountered, discuss actions to resolve the problems, and project key activities for the upcoming year.*

**Status of Groundwater Monitoring and Corrective Action Program.** The groundwater monitoring and corrective action program is currently in Assessment Monitoring.

**Summary of Key Actions Completed.**

- Statistical evaluation for the October 2022, January 2023, and April 2023 assessment monitoring events.
- Installation of supplemental monitoring well MW-316.
- Alternative Source Demonstration for arsenic at MW-303 following the October 2022 monitoring event.
- Two semiannual groundwater sampling and analysis events and two additional sampling events (January, April, May, and October 2023).

**Description of Any Problems Encountered.** Monitoring wells M-4R, MW-304, and MW-305 were not sampled during the April 2023 or October 2023 monitoring events due to insufficient water in the wells. A dewatering well system was in operation in 2023 to lower groundwater levels to assist with the ongoing pond closure at COL. The groundwater dewatering system ceased operations in September 11, 2023, but groundwater elevations had not recovered sufficiently to collect samples in October 2023. Samples were collected from the remaining wells in the monitoring system.

Reanalysis was conducted for Appendix IV parameters collected during the October 2022 monitoring event at background wells MW-84A and MW-301. The background well samples were reanalyzed for select metals because the original results were flagged for detections in the method blank sample and/or were not consistent with historical results.

**Discussion of Actions to Resolve the Problems.** The CCR removal is now complete and the associated dewatering system has been shut down. These wells will be sampled after the water levels recover enough to allow sampling. If the water level remains too low for sampling, then installation of deeper replacement wells or another action to restore the monitoring system will be implemented.

The reanalysis for background results at MW-84A and MW-301 was completed within the method holding time, the metals were not detected in the method blank, and no other flags were applied to the results. Based on the quality control review, the reanalysis results were considered to be more accurate than the original analyses.

**Projection of Key Activities for the Upcoming Year (2024).**

- Statistical evaluation and determination of any SSLs exceeding the GPS for the October 2023 and April 2024 monitoring events.
- Two semiannual groundwater sampling and analysis events (April and October 2024).

- If one or more Appendix IV constituents is detected at an SSL above the GPS, then within 30 days WPL will prepare a notification in accordance with §257.95(g) and within 90 days complete an alternative source demonstration or initiate an assessment of corrective measures (§257.95(g)(3)). WPL will also characterize the release pursuant to §257.95(g)(1) and provide notice pursuant to §257.95(g)(2).
- Further evaluation of the current groundwater monitoring network following ceasing dewatering and removal of CCR, which may result in installation of deeper wells or other action to restore the monitoring system as necessary.

### **3.5.2      §257.94(d) Alternative Detection Monitoring Frequency**

*The owner or operator must include the demonstration providing the basis for the alternative monitoring frequency and the certification by a qualified professional engineer in the annual groundwater monitoring and corrective action report required by §257.90(e).*

Not applicable. The Primary Ash Pond is no longer in detection monitoring.

### **3.5.3      §257.94(e)(2) Alternative Source Demonstration for Detection Monitoring**

*The owner or operator must also include the demonstration in the annual groundwater monitoring and corrective action report required by §257.90(e), in addition to the certification by a qualified professional engineer.*

Not applicable. The Primary Ash Pond is no longer in detection monitoring.

### **3.5.4      §257.95(c) Alternative Assessment Monitoring Frequency**

*The owner or operator must include the demonstration providing the basis for the alternative monitoring frequency and the certification by a qualified professional engineer in the annual groundwater monitoring and corrective action report required by §257.90(e).*

Not applicable. Assessment monitoring has been initiated at the site, but no alternative assessment monitoring frequency is proposed at this time.

### **3.5.5      §257.95(d)(3) Assessment Monitoring Results and Standards**

*Include the recorded concentrations required by paragraph (d)(1) of this section, identify the background concentrations established under § 257.94(b), and identify the groundwater protection standards established under paragraph (d)(2) of this section in the annual groundwater monitoring and corrective action report required by §257.90(e).*

The 2023 assessment monitoring results, background UPLs, and GPSs established for the Primary Ash Pond are provided in **Table 5**. The laboratory reports are provided in **Appendix C**. Historical monitoring results are summarized in **Appendix D**.

### **3.5.6 §257.95(g)(3)(ii) Alternative Source Demonstration for Assessment Monitoring**

*The owner or operator must also include the demonstration in the annual groundwater monitoring and corrective action report required by §257.90(e), in addition to the certification by a qualified professional engineer.*

The ASD report prepared to address the SSL above the GPS observed for arsenic at MW-303 for the October 2022 sampling event is provided in **Appendix F**. The ASD report is certified by a qualified professional engineer.

### **3.5.7 §257.96(a) Extension of Time for Corrective Measures Assessment**

*The assessment of corrective measures must be completed within 90 days, unless the owner or operator demonstrates the need for additional time to complete the assessment of corrective measure due to site-specific conditions or circumstances. The owner or operator must obtain a certification from a qualified professional engineer attesting that the demonstration is accurate. The 90-day deadline to complete the assessment of corrective measures may be extended for longer than 60 days. The owner or operator must also include the demonstration in the annual groundwater monitoring and corrective action report required by §257.90(e), in addition to the certification by a qualified professional engineer.*

Not applicable. Corrective measures assessment has not been initiated.

## **3.6 §257.90(E)(6) OVERVIEW**

*A section at the beginning of the annual report that provides an overview of the current status of groundwater monitoring and corrective action programs for the CCR unit.*

The specific requirements for the overview under §257.90(e)(6) are listed and the information is provided at the beginning of this report, before the Table of Contents.

**Table 4. Horizontal Gradients and Flow Velocity**  
**Columbia Energy Center - Primary Pond / SCS Engineers Project #25223067.00**  
**January - December 2023**

Flow Path A - South/Southwest					
Sampling Dates	h1 (ft)	h2 (ft)	Δl (ft)	Δh/Δl (ft/ft)	V (ft/d)
4/24-27/2023	787.75	785.00	92	0.030	3.5
10/9-11/2023	783.09	781.00	114	0.018	2.1

Flow Path B - Northeast					
Sampling Dates	h1 (ft)	h2 (ft)	Δl (ft)	Δh/Δl (ft/ft)	V (ft/d)
4/24-27/2023	785.30	784.03	1799	0.001	0.1

Flow Path C - West					
Sampling Dates	h1 (ft)	h2 (ft)	Δl (ft)	Δh/Δl (ft/ft)	V (ft/d)
10/9-11/2023	780.00	779.93	121	0.001	0.1

Wells	K Values (cm/sec)	K Values (ft/d)
M-4R	3.0E-03	8.4
M-303	4.0E-02	114
M-304	1.2E-02	34
M-305	5.0E-02	141
Geometric Mean	1.6E-02	46

Assumed Porosity, n
0.40

Groundwater flow velocity equation:  $V = [K * (\Delta h / \Delta l)] / n$

ft = feet

ft/d = feet per day

K = hydraulic conductivity

n = effective porosity

V = groundwater flow velocity

h1, h2 = point interpreted groundwater elevations at locations 1 and 2

Δl = distance between location 1 and 2

Δh/Δl = hydraulic gradient

NA - not applicable

**Note:**

- See Figures 3 and 4 for velocity calculation flow path locations.

Blue shaded cell indicates the compliance well result exceeds the UPL (background) and the LOQ.

Yellow highlighted cell indicates the compliance well result exceeds the GPS.

#### Abbreviations:

mg/L = milligrams per liter

LOD = Limit of Detection

ug/L = micrograms per liter

LOQ = Limit of Quantitation

-- = Not Analyzed

DQ = Double Quantification Rule (not detected in background)

amsl = above mean sea level

P = Parametric UPL with 1-of-2 retesting

NP = Nonparametric UPL (highest background value)

#### Lab Notes:

J = Estimated concentration at or above the LOD and below the LOQ.

M0 = Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

P6 = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

R1 = RPD value was outside control limits.

1q = Analyte was measured in the associated method blank at -0.26 ug/L.

#### Notes:

1. An individual result above the UPL or GPS does not constitute a statistically significant increase (SSI) above background or statistically significant level above the GPS. See the accompanying letter text for identification of statistically significant results.

2. GPS is the United States Environmental Protection Agency (USEPA) Maximum Contamination Level (MCLs), if established; otherwise, the values from 40 CFR 257.95(h)(2).

3. Interwell UPLs calculated based on results from background wells MW-84 and MW-301.

4. Introwell UPL for fluoride is based on the double quantification rule, because fluoride was not detected above the LOQ in the background samples.

\* = UPL is below the LOQ for background sampling. For compliance wells, only results confirmed above the LOQ are evaluated as potential SSIs above background.

<sup>^</sup> MW-304 water level dropped below pump shortly after beginning low-flow purging.

MW-316	5/5/2023	NS	12.80	8.32	0.09	636	-167	0.05

Abbreviations:

mg/L = milligrams per liter

umhos/cm = micromhos/cm

NS = Not Surveyed

amsl = Above mean sea level

NM = Not Measured

Notes:

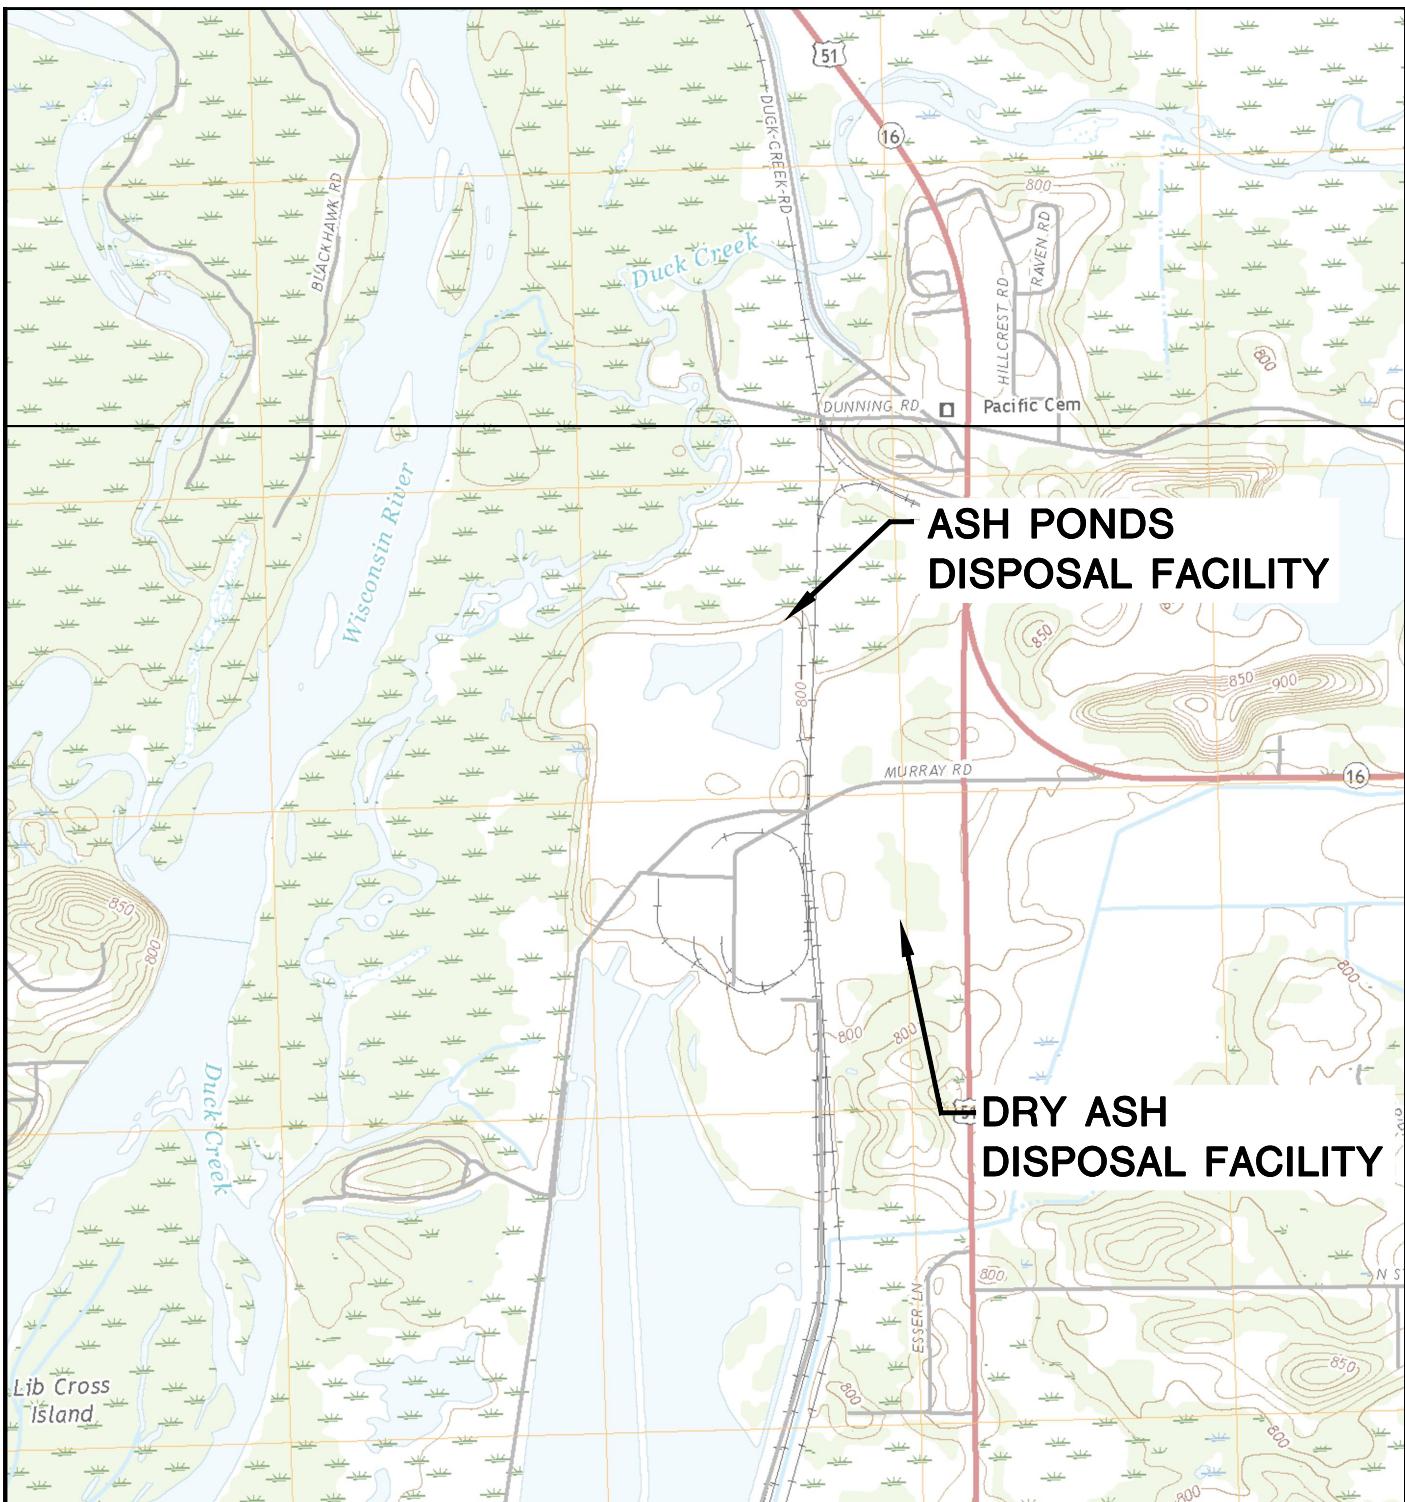

1. Groundwater elevation was below the top of the dedicated pump at M-4R during the October 2022 monitoring event.
2. MW-304 was dry during the October 2022 sampling event due to ongoing dewatering at the site.

#### EXPLANATION

Probable well yields

Chances of more than 100 gallons  
per minute are poor

Chances of 500-1000 gallons  
per minute are good

Chances of 100-500 gallons  
per minute are good

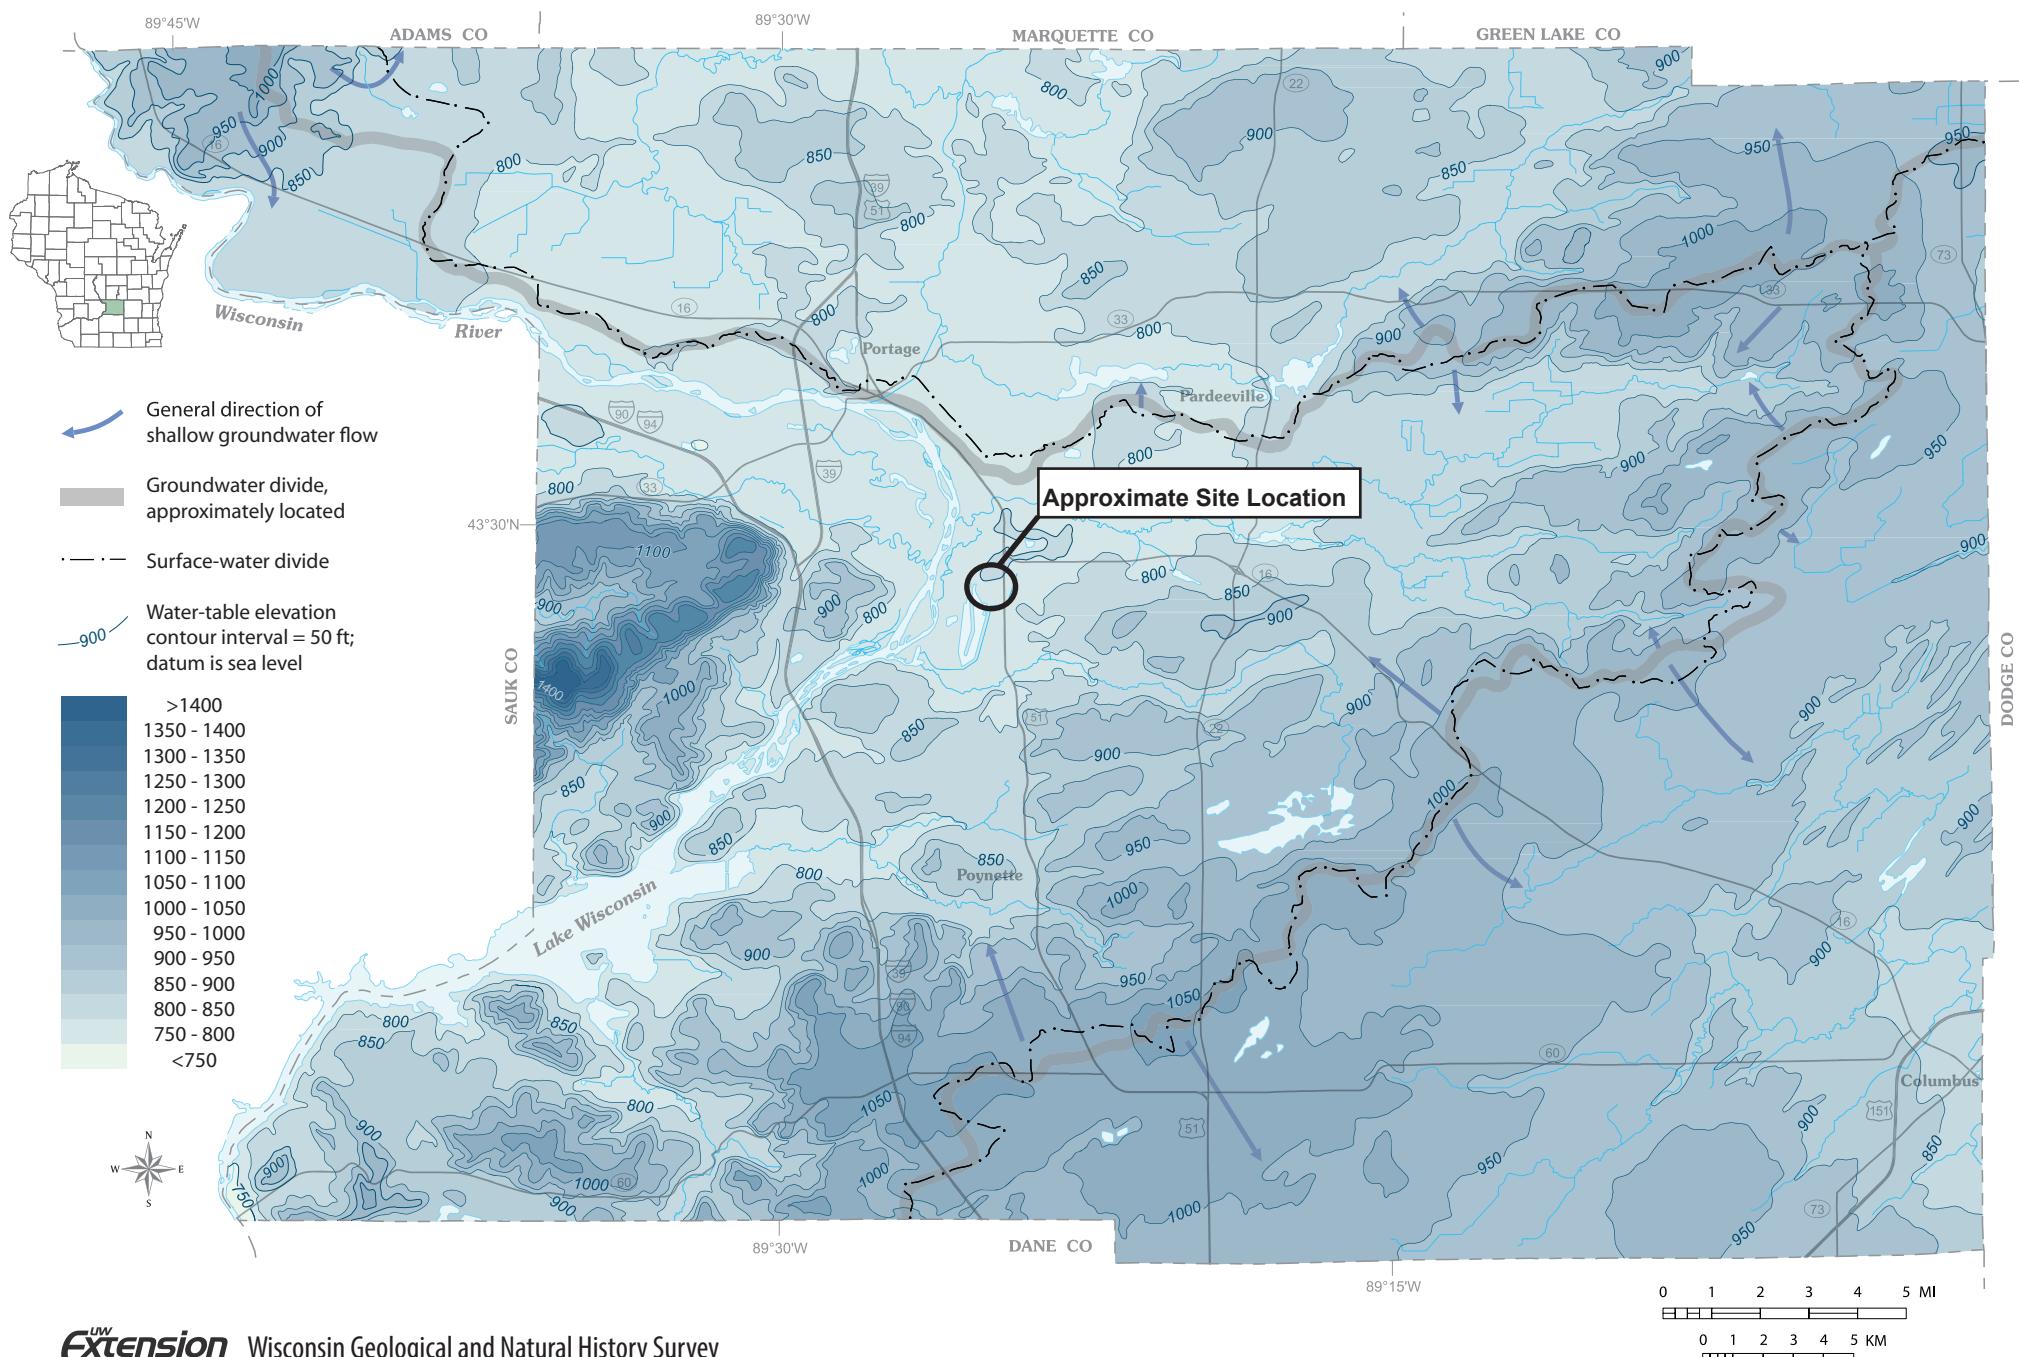

Chances of more than 1000 gallons  
per minute are good

Boundary of saturated sand-and-gravel aquifer

Figure 9. Probably well yields from the sand-and-gravel aquifer.

## Generalized water-table elevation in Columbia County, Wisconsin

### Laboratory Reports

## C1 – October 2022 Assessment Monitoring

December 02, 2022

Meghan Blodgett  
SCS ENGINEERS  
2830 Dairy Drive  
Madison, WI 53718

RE: Project: 25222067 COLUMBIA CCR BACKGRND  
Pace Project No.: 40253965

Dear Meghan Blodgett:

Enclosed are the analytical results for sample(s) received by the laboratory on October 29, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

## QUALIFIERS

Project: 25222067 COLUMBIA CCR BACKGRND

Pace Project No.: 40253965

---

### DEFINITIONS

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

H6 Analysis initiated outside of the 15 minute EPA required holding time.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

P6 Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,

RE: Project: 25222067 COLUMBIA CCR BACKGRND  
Pace Project No.: 40255945

Dear Meghan Blodgett:

Enclosed are the analytical results for sample(s) received by the laboratory on December 14, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky  
dan.milewsky@pacelabs.com

## QUALIFIERS

Project: 25222067 COLUMBIA CCR BACKGRND

Pace Project No.: 40255945

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: 25222067 COLUMBIA CCR PRIMPOND  
Pace Project No.: 40253825

Dear Meghan Blodgett:

Enclosed are the analytical results for sample(s) received by the laboratory on October 27, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky  
dan.milewsky@pacelabs.com

## QUALIFIERS

Project: 25222067 COLUMBIA CCR PRIMPOND

Pace Project No.: 40253825

---

### DEFINITIONS

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

H6 Analysis initiated outside of the 15 minute EPA required holding time.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

P6 Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

## C2 – January 2023 Supplemental Assessment Monitoring

February 15, 2023

Meghan Blodgett  
SCS ENGINEERS  
2830 Dairy Drive  
Madison, WI 53718

RE: Project: 25222157 COL CCR PRIM POND  
Pace Project No.: 40257413

Dear Meghan Blodgett:

Enclosed are the analytical results for sample(s) received by the laboratory on January 24, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky  
dan.milewsky@pacelabs.com

## QUALIFIERS

Project: 25222157 COL CCR PRIM POND  
Pace Project No.: 40257413

---

### DEFINITIONS

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

1q Analyte was measured in the associated method blank at a concentration of -0.26ug/L.

H6 Analysis initiated outside of the 15 minute EPA required holding time.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

R1 RPD value was outside control limits.

## C3 – April 2023 Assessment Monitoring

May 26, 2023

Meghan Blodgett  
SCS ENGINEERS  
2830 Dairy Drive  
Madison, WI 53718

RE: Project: 25223067 COLUMBIA CCR BCKGRND  
Pace Project No.: 40261460

Dear Meghan Blodgett:

Enclosed are the analytical results for sample(s) received by the laboratory on April 28, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay
- Pace Analytical Services - Greensburg

Revised Report: REDOX has been added to the field data list for MW-84A.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky  
dan.milewsky@pacelabs.com

## QUALIFIERS

Project: 25223067 COLUMBIA CCR BCKGRND  
Pace Project No.: 40261460

---

### DEFINITIONS

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

DL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

H6 Analysis initiated outside of the 15 minute EPA required holding time.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

P6 Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

RE: Project: 25223067 COLUMBIA CCR PRIMARY  
Pace Project No.: 40261454

Dear Meghan Blodgett:

Enclosed are the analytical results for sample(s) received by the laboratory on April 28, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

## QUALIFIERS

Project: 25223067 COLUMBIA CCR PRIMARY  
Pace Project No.: 40261454

---

### DEFINITIONS

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

DL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

D3      Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

H6      Analysis initiated outside of the 15 minute EPA required holding time.

P6      Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

## C4 – May 2023 Supplemental Assessment Monitoring

May 10, 2023

Meghan Blodgett  
SCS ENGINEERS  
2830 Dairy Drive  
Madison, WI 53718

RE: Project: 25223067 ALLIANT COLUMBIA  
Pace Project No.: 40261817

Dear Meghan Blodgett:

Enclosed are the analytical results for sample(s) received by the laboratory on May 06, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky  
dan.milewsky@pacelabs.com

## QUALIFIERS

Project: 25223067 ALLIANT COLUMBIA

Pace Project No.: 40261817

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

## PE CERTIFICATION

I, Sherren Clark, hereby certify that the information in this alternative source demonstration is accurate and meets the requirements of 40 CFR 257.95(g)(3)(ii). This certification is based on my review of the groundwater data and related site information available for the Columbia Energy Center Primary Ash Pond. I am a duly licensed Professional Engineer under the laws of the State of Wisconsin.

A handwritten signature in blue ink that appears to read "SL Clark".

June 9, 2023

Alternative Source Demonstration, October 2022 Assessment

Monitoring, Primary Ash Pond,

Columbia Energy Center, Pardeeville, Wisconsin

[This page left blank intentionally]

# **1.0 INTRODUCTION**

This Alternative Source Demonstration (ASD) was prepared to support compliance with the groundwater monitoring requirements of the “Coal Combustion Residuals (CCR) Final Rule” published by the U.S. Environmental Protection Agency (U.S. EPA) in the *Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals from Electric Utilities; Final Rule*, dated April 17, 2015 (U.S. EPA, 2015), and subsequent amendments. Specifically, this report was prepared to fulfill the requirements of 40 CFR 257.95(g)(3)(ii). The applicable sections of the Rule are provided below in *italics*.

## **1.1 §257.95(G)(3)(II) ALTERNATIVE SOURCE DEMONSTRATION REQUIREMENTS**

*40 CFR 257.95(g)(3): Within 90 days of finding that any of the constituents listed in Appendix IV to this part have been detected at a statistically significant level exceeding the groundwater protection standards the owner or operator must either:*

- (i) *Initiate an assessment of corrective measures as required by § 257.96; or*
- (ii) *Demonstrate that a source other than the CCR unit caused the contamination, or that the statistically significant increase resulted from error in sampling, analysis, statistical evaluation, or natural variation in groundwater quality. Any such demonstration must be supported by a report that includes the factual or evidentiary basis for any conclusions and must be certified to be accurate by a qualified professional engineer or approval from the Participating State Director or approval from EPA where EPA is the permitting authority. If a successful demonstration is made, the owner or operator must continue monitoring in accordance with the assessment monitoring program pursuant to this section, and may return to detection monitoring if the constituents in Appendix III and Appendix IV of this part are at or below background as specified in paragraph (e) of this section. The owner or operator must also include the demonstration in the annual groundwater monitoring and corrective action report required by § 257.90(e), in addition to the certification by a qualified professional engineer or the approval from the Participating State Director or the approval from EPA where EPA is the permitting authority.*

An ASD is completed when there are exceedances of one or more benchmarks established within the groundwater monitoring program to determine if any other sources are likely causes of the identified exceedance(s) of established benchmark(s) at the site. This ASD was performed in response to results indicating that arsenic was identified to be at a statistically significant level (SSL) above the groundwater protection standard (GPS) during assessment monitoring under the CCR Rule.

This ASD report evaluates an SSL observed in the statistical evaluation of the October 2022 assessment monitoring event at the Columbia Energy Center (COL) Primary Ash Pond CCR Unit. This is the first ASD prepared for this facility unit since monitoring began in December 2015.

## **1.2 SITE INFORMATION AND MAP**

The COL site is located at W8375 Murray Road, Pardeeville, Columbia County, Wisconsin (**Figure 1**). It is an active coal-burning generating station, which has been burning coal and disposing of CCR on site since the mid-1970s. The layout of the site is shown on **Figure 2**. The COL property includes two

CCR surface impoundments, the Primary Pond (existing CCR surface impoundment), and the Secondary Pond (inactive CCR surface impoundment). This ASD will evaluate the conditions at the site for the Primary Ash Pond only.

The groundwater monitoring system monitors the following CCR Unit:

- COL Primary Ash Pond (existing CCR surface impoundment)

The system is designed to detect monitored constituents at the waste boundary of the Primary Ash Pond as required by 40 CFR 257.91(d). The groundwater monitoring system consists of two background monitoring wells (MW-84A and MW-301) and four downgradient monitoring wells (M-4R, MW-303, MW-304, and MW-305). A temporary monitoring well, MW-316, was installed to evaluate groundwater quality between compliance well MW-303 and the Primary Pond (**Figure 2**).

A map showing the CCR Units and all background (or upgradient) and downgradient monitoring wells with identification numbers for the CCR groundwater monitoring program and the state monitoring program is provided on **Figure 2**. Separate monitoring systems have been established for the other CCR Units at COL, which include the Secondary Ash Pond and Modules 1-3, Modules 4-6, and Modules 10-11 of the COL Dry Ash Disposal Facility (ADF).

### **1.3 STATISTICALLY SIGNIFICANT LEVELS IDENTIFIED**

The October 2022 results for Appendix IV parameters were compared to the Groundwater Protection Standards (GPSs) established under 40 CFR 257.95(h) to evaluate whether any Appendix IV parameter was present at an SSL above the GPS. The October 2022 results and GPS values, along with the May 2023 MW-316 arsenic result, are shown in **Table 1**.

For the October 2022 monitoring event, assessment monitoring parameters for which an individual monitoring result exceeded the GPS at a compliance well included the following:

- Arsenic: MW-303
- Selenium: MW-303

The U.S. EPA's Unified Guidance for Statistical Analysis of Groundwater Monitoring Data at Resource Conservation and Recovery Act (RCRA) Facilities (EPA 530-R-09-007, March 2009) recommends the use of confidence intervals for comparison of assessment monitoring data to fixed GPS values. Specifically, the suggested approach for comparing assessment groundwater monitoring data to GPS values based on long-term chronic health risk, such as drinking water Maximum Contaminant Levels (MCLs), is to compare the lower confidence limit (LCL) around the arithmetic mean with the fixed GPS.

An LCL evaluation was completed for each Appendix IV parameter that has been detected at a concentration exceeding the GPS in at least one sample result since assessment monitoring was initiated, which includes arsenic, molybdenum, and selenium. The LCLs were calculated with Sanitas™ using historical concentrations measured since assessment monitoring began in April 2018. The evaluation is provided in **Appendix A**.

The October 2022 arsenic and selenium results at MW-303 were higher than previous results; therefore, the arsenic and selenium results for this well were also evaluated for a potential increasing trend using a Mann-Kendall analysis (**Appendix A**). Trend analysis for the arsenic and selenium results obtained since assessment monitoring was initiated indicated no significant trend

for either parameter. To focus on the more recent data, Mann-Kendall trend analysis was also performed for the last eight samples for each parameter (**Appendix A**). The analysis of the last eight samples indicated a significant increasing trend for arsenic, and the lower limit for the 98-percent confidence band around the trend line exceeded the GPS. Based on these results, arsenic is at an SSL above the GPS at MW-303. No significant trend was identified for the last eight selenium samples at MW-303.

Based on the LCL and trend evaluation, arsenic is at an SSL above the GPS at MW-303. The molybdenum and selenium results to date do not represent an SSL above the GPS.

A time series plot for arsenic at all of the Primary Pond monitoring wells is provided in **Appendix B**.

## 1.4 OVERVIEW OF ALTERNATIVE SOURCE DEMONSTRATION

This ASD report includes:

- Background information (**Section 2.0**).
- Evaluation of potential that SSLs are due to methodology or analysis (**Section 3.0**).
- Evaluation of potential that SSLs are due to natural sources or man-made sources other than the CCR Units (**Section 4.0**).
- ASD conclusions (**Section 5.0**).
- Monitoring recommendations (**Section 6.0**).

The CCR Rule constituent results from background and compliance sampling for arsenic are provided in **Table 2**. The laboratory reports for the October 2022 assessment monitoring event were reviewed, finalized, and transmitted in January 2023, and will be included in the 2023 Annual Groundwater Monitoring and Corrective Action Report to be completed in January 2024. Complete laboratory reports for the background monitoring events and the previous detection monitoring events were included in previous annual groundwater monitoring and corrective action reports.

## 2.0 BACKGROUND

To provide context for the ASD evaluation, the following background information is provided in this section of the report, prior to the ASD evaluation sections:

- Geologic and hydrogeologic setting
- CCR Rule monitoring system
- Other monitoring wells

A more detailed discussion of the background information for the site is provided in the ASD for the COL Dry Ash Disposal Facility - Modules 1 - 3 for the October 2017 event (SCS, 2018).

## **2.1 REGIONAL GEOLOGY AND HYDROGEOLOGY**

### **2.1.1 Regional Information**

For the purposes of groundwater monitoring, the surficial sand and gravel aquifer is considered the uppermost aquifer, as defined under 40 CFR 257.53. Immediately underlying the surficial sand and gravel aquifer is the Cambrian-Ordovician sandstone aquifer.

A summary of the regional hydrogeologic stratigraphy is presented in **Appendix C**. The sand and gravel aquifer is capable of producing sufficient water for industrial or municipal use in some parts of Columbia County and is capable of producing sufficient water for domestic use in many areas, including along the Wisconsin River near the Columbia Energy Center (Harr et. al, 1978). A map showing expected well yields within the sand and gravel aquifer in Columbia County is included in **Appendix C**.

Regional groundwater flow in the site vicinity is generally west toward the Wisconsin River. A map showing the regional water table elevations is included with the regional hydrogeologic information in **Appendix C**.

### **2.1.2 Site Information**

Soils at the site are primarily sand to a depth of approximately 50 to 100 feet and overlie sandstone bedrock. Soils encountered during the site feasibility study for the COL Ash Disposal Facility were described as generally sandy with interbedded silty clay lenses up to 20 feet thick (Warzyn, 1978). During drilling of CCR wells MW-301, MW-303, MW-304, and MW-305, the unconsolidated materials were identified as consisting primarily of silty sand and sand. Boring logs for previously-installed monitoring wells MW-84A and M-4R show silty sand and sand as the primary unconsolidated materials at these locations. The boring logs for Primary Ash Pond CCR monitoring wells are provided in Appendix B of the 2022 Annual Report (SCS Engineers, 2023). All CCR monitoring wells are screened within the unconsolidated sand unit.

In the vicinity of the ash ponds, groundwater flow has historically been radially away from the ponds in all directions. The October 2020 water table is shown on **Figure 3** as an example of the typical historical flow patterns. The October 2022 water levels and apparent flow directions, shown on **Figure 4**, reflect the influence of a temporary groundwater dewatering system installed to lower groundwater levels in the area of the Secondary Pond as part of the closure project for that CCR Unit.

The groundwater dewatering pumps for the Secondary Pond were shut off on November 30, 2022. Groundwater dewatering pumps for the Primary Ash Pond were started up on March 8, 2023. The groundwater dewatering around the Primary Ash Pond is also having an influence on groundwater flow in the area of the ponds, with localized flow toward the Primary Ash Pond as shown on the May 2023 water table map (**Figure 5**).

## **2.2 CCR RULE MONITORING SYSTEM**

The groundwater monitoring system established in accordance with the CCR Rule consists of two upgradient (background) monitoring wells and three downgradient monitoring wells. The background wells include MW-301 and MW-84A. The downgradient wells include MW-303, MW-304, MW-305, and M-4R. The CCR Rule wells are installed within the sand and gravel aquifer. Well depths range from approximately 25 to 41 feet, measured from the top of the well casing.

## **2.3 OTHER MONITORING WELLS**

Additional groundwater monitoring wells currently exist at COL as part of the monitoring systems developed for the state monitoring program and for the other CCR Units.

Monitoring wells for the state monitoring program are installed in the unconsolidated sand and gravel unit, which is the uppermost aquifer as defined under 40 CFR 257.53. This shallow monitoring system includes water table wells and mid-depth piezometers. Well depths range from approximately 14 to 76 feet, measured from the top of the well casing.

A temporary monitoring well, MW-316, was installed in April 2023 to support the source evaluation for the arsenic SSL discussed in this report. Monitoring well MW-316 is located between well MW-303 and the Primary Ash Pond (**Figure 2**) and is also installed in the unconsolidated sand and gravel unit that comprises the uppermost aquifer. Well construction documentation for MW-316 is included in Appendix D.

## **3.0 METHODOLOGY AND ANALYSIS REVIEW**

To evaluate the potential that an SSL is due to a source other than the regulated CCR Unit, SCS used a two-step evaluation process. First, the sample collection, field and laboratory analysis, and statistical evaluation were reviewed to identify any potential error or analysis that led to exceedance of the benchmark. Second, potential alternative sources, including natural variation and man-made sources other than the CCR Unit, were evaluated. This section of the report provides the findings of the methodology and analysis review. **Section 4.0** of the report addresses the potential alternative sources.

### **3.1 SAMPLING AND FIELD ANALYSIS**

Field notes and sampling results were reviewed to determine if any sampling error may have caused or contributed to the observed SSL. Potential field sampling errors or issues could include mislabeling of samples, improper sample handling, missed holding times, cross contamination during sampling, or other field errors. Field blank sample results were also reviewed for any indication of potential contamination from sampling equipment or containers.

Based on the review of field notes and comparison to previous results, no sampling error issues were identified in the laboratory analytical reports or the field notes that would indicate a sampling error may have caused or contributed to the observed SSL. The historical results for arsenic are summarized in **Table 2**.

### **3.2 LABORATORY ANALYSIS REVIEW**

The laboratory reports for the October 2022 assessment monitoring event were reviewed to determine if any laboratory analysis error or issue may have caused or contributed to an observed SSL for arsenic. The laboratory report review included reviewing the laboratory quality control flags and narrative, verifying that correct methods were used and desired detection limits were achieved, and checking the field and laboratory blank sample results.

Based on the review of the laboratory reports, SCS did not identify any issues that indicate the SSL for arsenic may have been due to a laboratory analysis error. There were no laboratory quality control flags or issues identified in the laboratory reports that affect the usability of the data for assessment monitoring.

A time series plot of the arsenic analytical data were also reviewed for any anomalous results that might indicate a possible sampling or laboratory error (e.g., dilution error or incorrect sample labeling). The time series plot is provided in **Appendix B**. Arsenic concentrations at MW-303 have been highly variable since sampling began, but the variations do not appear to reflect a sampling or laboratory error.

### **3.3 STATISTICAL EVALUATION REVIEW**

The review of the statistical results and methods included a quality control check of the following:

- Input analytical data vs. laboratory analytical reports
- Statistical method and process for each SSL

Based on the review of the statistical evaluation, SCS did not identify any errors in the statistical evaluation that caused or contributed to the determination that arsenic was at an SSL above the GPS for the October 2022 assessment monitoring event.

### **3.4 SUMMARY OF METHODOLOGY AND ANALYSIS REVIEW FINDINGS**

In summary, the October 2022 event is the first occurrence of an SSL for this unit since initiation of assessment monitoring. There were no changes to the SSL determinations for the October 2022 monitoring event based on the methodology and analysis review. No other errors or issues causing or contributing to the reported SSL were identified.

## **4.0 ALTERNATIVE SOURCES**

This section of the report discusses the potential alternative sources for the arsenic SSL at the monitoring well MW-303, identifies the most likely alternative source(s), and presents the lines of evidence indicating that an alternative source is the most likely cause of the observed SSL.

### **4.1 POTENTIAL CAUSES OF SSL**

#### **4.1.1 Natural Variation**

The statistical analysis was completed using an interwell approach, comparing the October 2022 detection monitoring results to the UPLs calculated based on the sampling of the background wells (MW-84A and MW-301). If concentrations of a constituent that is naturally present in the aquifer vary spatially, then the potential exists that the downgradient concentrations may be higher than upgradient concentrations due to natural variation. Previous monitoring results for arsenic at the COL Primary Pond are shown in **Table 2**.

Natural variation may be present in the shallow aquifer for any of the parameters and may have contributed to the SSL for arsenic in MW-303. Although natural variation is present in the shallow aquifer, it does not appear likely that natural variation is the primary source that caused the arsenic SSL.

## **4.1.2 Man-Made Alternative Sources**

Man-made alternative sources that could potentially contribute to the arsenic SSL at Primary Pond monitoring well MW-303 could include the closed ash pond landfill, the product recycling area, or other CCR management activities.

Recent changes in groundwater flow due to dewatering activities make determination of man-made alternative sources uncertain. CCR removal activities from the Secondary Ash Pond and the Primary Pond in 2022 and 2023 could also contribute to movement of arsenic in groundwater from uncertain sources. Changes in groundwater flow direction and differing recharge patterns caused by dewatering and subsequent movement of surface water to the secondary pond could also affect the ambient redox conditions, and mobilize naturally occurring arsenic.

## **4.2 LINES OF EVIDENCE**

The lines of evidence indicating that the SSL for arsenic is due to an alternative source include:

1. Temporary monitoring well MW-316 installed between well MW-303 and the Primary Pond has a low arsenic concentration.
2. CCR wells located immediately adjacent to the Primary Pond have always had low arsenic. The low arsenic concentration in the new temporary well is consistent with those results.
3. The effects of the ongoing dewatering activities on the arsenic concentrations at MW-303 indicate that the Primary Pond is not the source of arsenic at MW-303, and suggest the closed ash landfill is a more likely source.

### **4.2.1 Low Arsenic Concentration in Well MW-316**

Temporary monitoring well MW-316, installed between well MW-303 and the Primary Pond, has a low arsenic concentration. Elevated arsenic concentrations would be expected at MW-316 if the Primary Pond is the source of the arsenic SSL at MW-303.

Temporary monitoring well MW-316 was installed between monitoring well MW-303 and the Primary Pond (**Figure 2**). Unlike the other Primary Pond compliance wells, which were installed at the edge of the Primary Pond, well MW-303 was installed approximately 700 feet south of the impounded water due to active ash management and beneficial use activities adjacent to the Primary Pond. Closure activities have since provided room to install the new well MW-316 approximately 500 feet closer to the Primary Pond. New well MW-316 was specifically installed to evaluate the Primary Pond as a potential source of the elevated arsenic in well MW-303. Prior to the groundwater dewatering and pond closure activities, groundwater flowed from the Primary Pond, past the location of the new MW-316 well, then toward well MW-303 (**Figures 2 and 3**).

Monitoring well MW-316 was installed on April 27, 2023, and sampled on May 5, 2023. The boring log and well construction form are located in **Appendix D**. The laboratory result for the groundwater arsenic concentration was 1.2 µg/L (**Appendix E**). Since well MW-316 is located on the historical groundwater flow path between the Primary Pond and well MW-303, it appears unlikely that the Primary Pond is the source of the elevated arsenic in well MW-303.

## **4.2.2 Low Arsenic in Other Primary Pond Wells**

CCR wells located immediately adjacent to the Primary Pond have always had low arsenic. The low arsenic concentration in the new temporary well is consistent with those results. Due to historic radial flow outward from the Primary Pond, elevated arsenic concentrations at multiple compliance wells would be expected if the Primary Pond was the source of arsenic at MW-303.

Primary Pond compliance wells M-4R, MW-304, and MW-305 have a low historic range of arsenic concentrations (**Table 2**). The arsenic concentrations range from <0.099 µg/L to 0.47 µg/L in well MW-4R, 0.63 µg/L to 3.2 µg/L in well MW-304, and <0.28 µg/L to 1.4 µg/L in well MW-305. These wells are located immediately adjacent to the Primary Pond, which has historically been a source of groundwater infiltration with radial flow, while MW-303 is located much further from the Primary Pond, as discussed in **Section 4.2.1**. The result from the initial sampling of well MW-316 is consistent with the historical monitoring at Primary Pond wells M-4R, MW-304, and MW-305. Based on the historical arsenic results for the Primary Pond wells located immediately adjacent to the pond, it appears unlikely that the Primary Pond is the source of the elevated arsenic in well MW-303.

## **4.2.3 Groundwater Dewatering Impacts on Arsenic Concentration in Well MW-303**

The effects of the ongoing groundwater dewatering activities on the arsenic concentrations at MW-303 indicate that the Primary Pond is not the source of arsenic at MW-303, and suggest the closed ash landfill is a more likely source. Arsenic concentrations at MW-303 increased in 2022, when groundwater dewatering was ongoing for the Secondary Pond closure, and decreased in 2023 when groundwater dewatering was ongoing for the Primary Pond closure.

The arsenic result for well MW-303 from the April 2023 sampling event was 4.0 µg/l (**Appendix E**). This is the lowest arsenic concentration detected at MW-303 since the initiation of baseline sampling in 2015. The full April 2023 results and statistical analysis will be discussed in the future Assessment Monitoring Report, due August 29, 2023. The previously observed increasing trend in arsenic in 2022, followed by a sharp decrease in 2023, are likely both related to temporary changes in flow direction induced by the dewatering systems operating around the Secondary Pond and Primary Pond during the pond closures.

Groundwater dewatering wells for closure of the Secondary Pond were installed from fall 2021 through summer 2022. The complete Secondary Pond groundwater dewatering system was operational by August 2, 2022, and continued to operate until November 30, 2022, discharging into the Primary Pond. In preparation for Primary Pond closure activities, discharge from the plant to the Primary Pond was reduced beginning in October 2022 and was terminated in March 2023. Groundwater dewatering for the Primary Pond closure began in March 2023. Historically, the ponds were a source of infiltration, with groundwater mounding and radial flow (October 2020, **Figure 3**). Under dewatering conditions, flow has been toward the dewatering wells around the Secondary Pond (October 2022, **Figure 4**) or the Primary Pond (May 2023, **Figure 5**). For the period when flow was toward the Secondary Pond in 2022, MW-303 was located between the closed fly ash landfill and the Secondary Pond, which suggests that the closed fly ash landfill may be a source of elevated arsenic in MW-303. In 2023, with flow toward the Primary Pond, MW-303 is no longer downgradient from the closed landfill, and the arsenic concentration has decreased. Prior to the start of the pond closures and associated dewatering, arsenic concentrations at MW-303 were highly variable, which may have been due to slight changes in groundwater flow direction or changes in redox conditions during periods of high or low recharge to the aquifer.

## **5.0 ALTERNATIVE SOURCE DEMONSTRATION CONCLUSIONS**

The lines of evidence discussed above regarding the SSL reported for arsenic in downgradient monitoring well MW-303 demonstrate that the SSL is likely due to sources other than the CCR Unit. The CCR wells located immediately adjacent to the Primary Pond have always had low arsenic. The low arsenic concentration in the new MW-316 well, located between the Primary Pond and MW-303, is consistent with those results. Based on the recent flow direction changes associated with dewatering for the Primary and Secondary Pond closures and the observed changes in arsenic concentration at MW-303, the closed fly ash landfill is a likely source of the elevated arsenic at MW-303.

## **6.0 SITE GROUNDWATER MONITORING RECOMMENDATIONS**

In accordance with section 257.95(g)(3)(ii) of the CCR Rule, the Primary Pond CCR Unit may continue with assessment monitoring based on this ASD. The ASD report will be included in the 2023 Annual Report due January 31, 2024.

  Blue shaded cell indicates the compliance well result exceeds the UPL (background) and the LOQ.

  Yellow highlighted cell indicates the compliance well result exceeds the GPS.

**Table 1. Groundwater Analytical Results Summary - Detection Monitoring**  
**Columbia Energy Center - Primary Pond / SCS Engineers Project #25223067.00**

**Abbreviations:**

mg/L = milligrams per liter  
ug/L = micrograms per liter  
-- = Not Analyzed

LOD = Limit of Detection  
LOQ = Limit of Quantitation  
DQ = Double Quantification Rule (not detected in background)

P = Parametric UPL with 1-of-2 retesting  
NP = Nonparametric UPL (highest background value)

**Lab Notes:**

J = Estimated concentration at or above the LOD and below the LOQ.  
P6 = Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the detection limit.  
D3 = Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

**Notes:**

1. An individual result above the UPL or GPS does not constitute a statistically significant increase (SSI) above background or statistically significant level above the GPS. See the accompanying letter text for identification of statistically significant results.
  2. GPS is the United States Environmental Protection Agency (USEPA) Maximum Contamination Level (MCLs), if established; otherwise, the values from 40 CFR 257.95(h)(2).
  3. Interwell UPLs calculated based on results from background wells MW-84 and MW-301.
  4. Intrawell UPL for fluoride is based on the double quantification rule, because fluoride was not detected above the LOQ in the background samples.
- \* = UPL is below the LOQ for background sampling. For compliance wells, only results confirmed above the LOQ are evaluated as potential SSIs above background  
^ = No sample was collected from MW-304 in October 2022 because the groundwater elevation was below the bottom of the dedicated pump.

Abbreviations:

µg/L = micrograms per liter or parts per billion (ppb)

J = Estimated value below the laboratory's limit of quantitation

1q = Analyte was measured in the associated method blank at a negative concentration.

Notes:

(1) Analytical laboratory reports provided in the Annual Groundwater Monitoring and Corrective Action Reports.

**Table 3. Groundwater Elevation - State Monitoring Program and CCR Well Network**  
**Columbia Dry Ash and Ash Pond Disposal Facilities / SCS Engineers Project #25223067.00**

Notes:  
NM = not measured

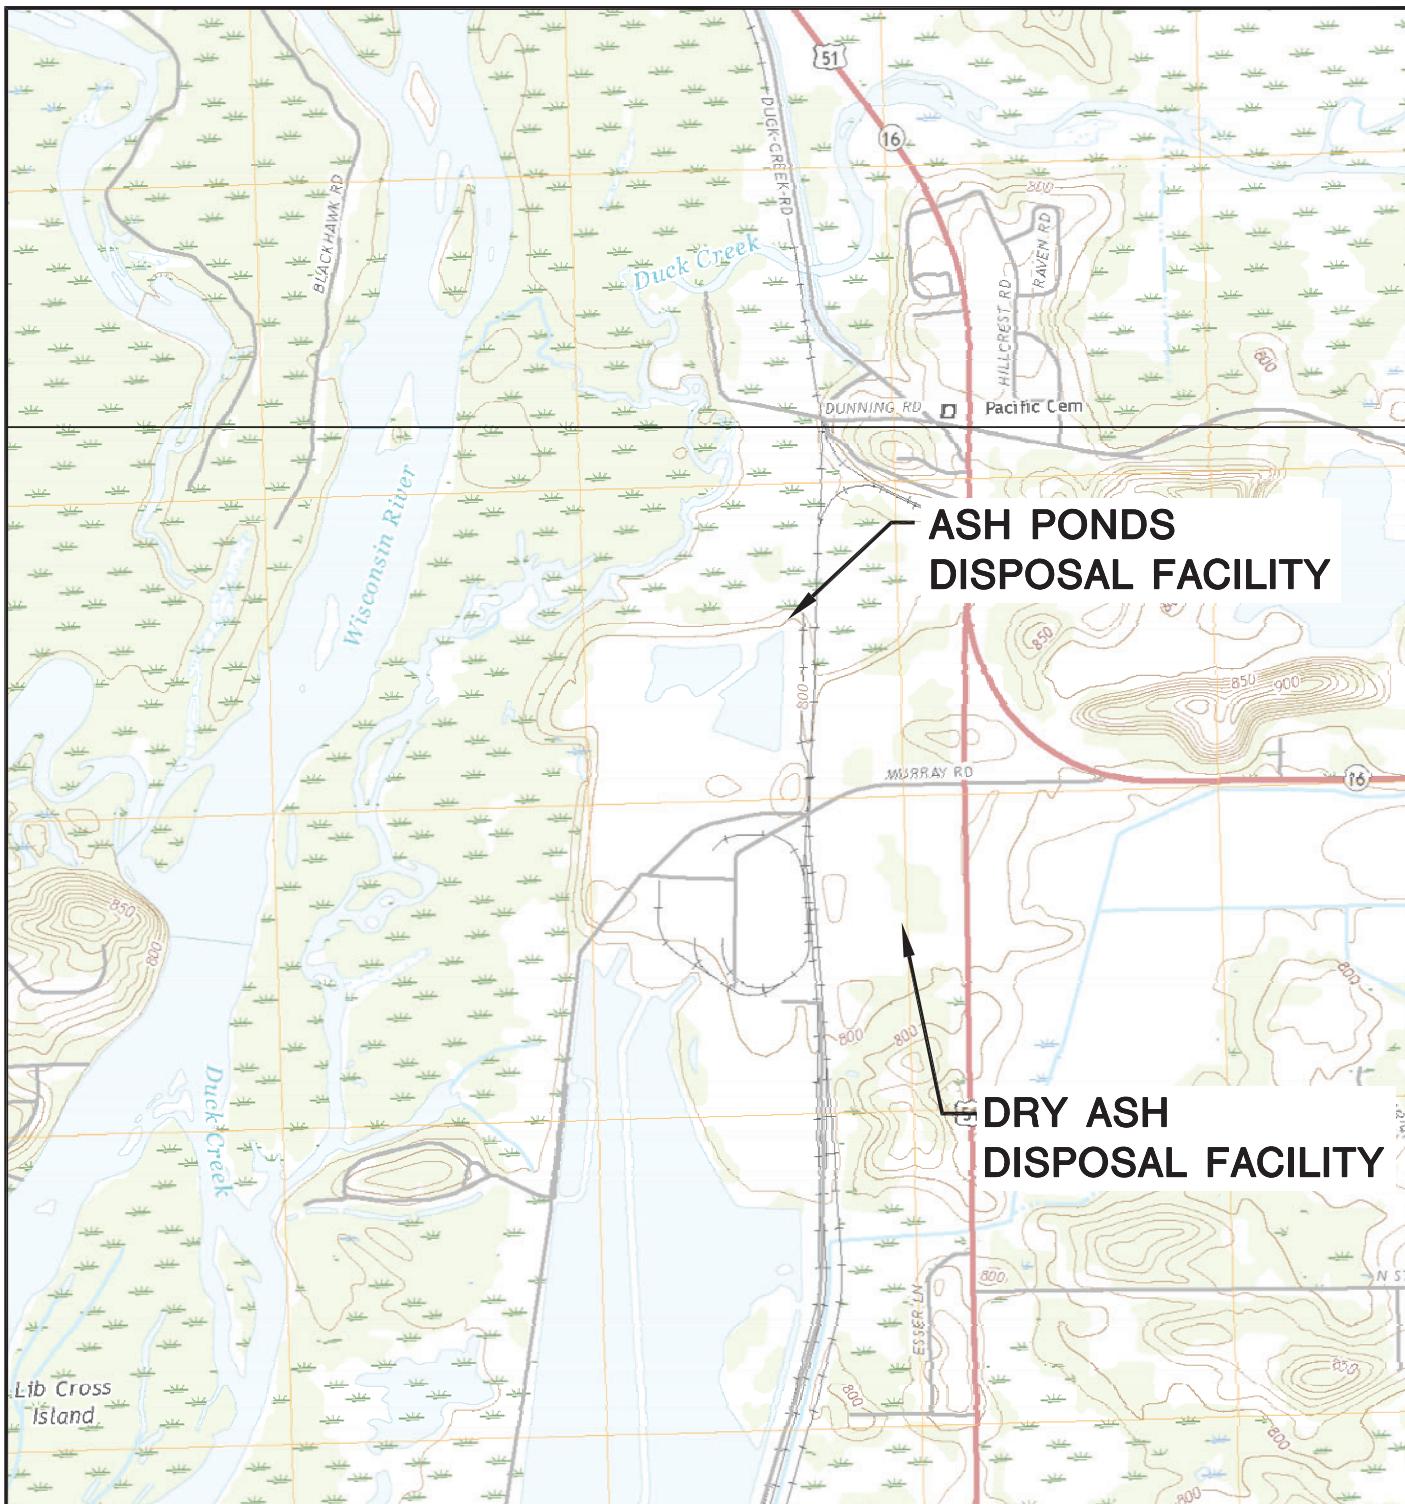

Created by: MDB Date: 5/6/2013  
Last revision by: NLB Date: 4/25/2023  
Checked by: RM Date: 5/1/2023

- (1) The elevation for SG-1 is read off of the staff gauge (rather than measured from the top of the gauge).  
(2) SG-2 could not be located during the April 2013 event.  
(3) SG-3 could not be located during the October 2013 event. SG-1 could not be safely accessed during the October 2013 event.  
(4) LH-2 measurements are given as leachate depth, measured by a transducer.  
(5) LH-2 and LH-3 measurements were collected by WPL staff on October 9, 2017.  
(6) The depth to water at MW-84A was not measured prior to purging for sampling during the October 3-5 sampling event. The level was allowed to return to static and was measured on 10/10/2017.  
(7) BC = Brian Clepper; NS= Nate Sievers - Columbia Site employees.  
(8) MW-303 was extended in 2022 due to regrading. Prior to October 2022, the TOC elevation was 811.52'. For events in October 2022 and later, the TOC elevation is 815.72'.

The diagram illustrates a vertical borehole with the following layers from top to bottom:
 

- A:** Protective pipe, top elevation at 809.20 ft. MSL.
- B:** Well casing, top elevation at 808.49 ft. MSL.
- C:** Land surface elevation at 806.31 ft. MSL.
- D:** Surface seal, bottom at 804.31 ft. MSL or 2 ft.
- E:** Bentonite seal, top at 806.31 ft. MSL or 0 ft.
- F:** Fine sand, top at 780.31 ft. MSL or 26 ft.
- G:** Filter pack, top at 778.31 ft. MSL or 28 ft.
- H:** Screen joint, top at 776.31 ft. MSL or 30 ft.
- I:** Well bottom at 766.31 ft. MSL or 40 ft.
- J:** Filter pack, bottom at 764.31 ft. MSL or 42 ft.
- K:** Borehole, bottom at 759.31 ft. MSL or 47 ft.
- L:** Borehole, diameter 6 in.
- M:** O.D. well casing 2.37 in.
- N:** I.D. well casing 2.01 in.

 The borehole is surrounded by soil layers (indicated by different patterns) and contains various components like the protective pipe, well casing, and filter pack.

### MW-303 and MW-316 Laboratory Reports

May 31, 2023

Meghan Blodgett  
SCS ENGINEERS  
2830 Dairy Drive  
Madison, WI 53718

RE: Project: 25223067 COLUMBIA CCR PRIMARY  
Pace Project No.: 40261454

Dear Meghan Blodgett:

Enclosed are the analytical results for sample(s) received by the laboratory on April 28, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky

## QUALIFIERS

Project: 25223067 COLUMBIA CCR PRIMARY

Pace Project No.: 40261454

---

### DEFINITIONS

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

DL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

D3      Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

H6      Analysis initiated outside of the 15 minute EPA required holding time.

P6      Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.

RE: Project: 25223067 ALLIANT COLUMBIA  
Pace Project No.: 40261817

Dear Meghan Blodgett:

Enclosed are the analytical results for sample(s) received by the laboratory on May 06, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Green Bay

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Dan Milewsky  
dan.milewsky@pacelabs.com

## QUALIFIERS

Project: 25223067 ALLIANT COLUMBIA

Pace Project No.: 40261817

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.
