Re: Notification of Groundwater Protection Standard Exceedance pursuant to 40 CFR 257.95

A constituent in Appendix IV to part 40 CFR 257 was detected at a statistically significant level above the groundwater protection standard (GPS) established under 40 CFR 257.95(h) in a monitoring well located at the WPL Edgewater Generating Station. The constituents exceeding the GPS are arsenic (MW-303). Lithium and molybdenum have previously been detected at statistically significant levels above the GPS at the site and an assessment of corrective measures (ACM) was prepared. The ACM will be updated to address all statistically significant levels above the GPS at the site as needed. This notification has been prepared in accordance with 40 CFR 257.95(g) and 257.105(h)(8).

This notification is provided for the Closure Area comprised of the following former CCR units at this facility:

- CCR units
- EDG Slag Pond
- EDG North A Pond
- EDG South A Pond
- EDG B Pond

Signed,
