### Meeting with the Allamakee County Emergency Committee

On December 3, 2019, I met with Corey Snitker who is part of the Local Emergency Planning Committee (LEPC) for Allamakee County to discuss current information on the CCR Impoundment since his last site visit on December 13<sup>th</sup>, 2018. We discussed that inspections are still performed on the impoundment, reminded him of the Alliant Energy's CCR Website, and gave him a current copy of the emergency action plan (EAP).

This meeting started at 10:00 a.m. and we discussed improvements made on the impoundment which include closing the lower pond to increase the structural integrity of the Northern berm of the ash pond. We also discussed the installation of the bentonite wall which continues to alleviate previous issues with seepage through the embankment.

We talked about the seven-day inspection requirements and noted that we generally inspect the pond twice per week. Mr. Snitker mentioned that animal burrows were discovered last year, and I let him know the animals were trapped and removed from the site. Animal burrows no longer seem to be an issue.

We talked about the future of the pond and the impacts that our wastewater permit have on the ability to sluice ash. I let him know our current permit will not allow us to sluice bottom or fly ash after December 31, 2021. We also discussed the tighter metals limits required in the wastewater permit and the pond will either need to be dewatered or the outfall would need to be re-routed to the Mississippi River which might allow for higher metals limits.

Corey and I discussed that we are beginning to talk about pond closure based on the wastewater permit requirements and the pond would need to be closed by 2023.
