Meeting with the Allamakee County Emergency Coordinator

On December 13, 2018, I met with the Allamakee County Iowa Emergency Coordinator (ACEC) at the Lansing Generating Station (i.e., Mr. Corey Snitker), to discuss any new information on the CCR Impoundment since his last site visit on August 9, 2017, review ongoing inspections of the impoundment (including 7-day, monthly, and annual), and walk him through the public record of CCR documents maintained on Alliant Energy's CCR Rule Compliance Data and Information web site. Mr. Snitker also drove by the impoundment.

This meeting started at 10:00 a.m. It was first noted that the CCR Emergency Action Plan (EAP) had not been revised since the 2017 copy already provided to him. We also reviewed the frequent inspections facility personnel perform to look for any signs of embankment instability (e.g., sloughing, cracking), seepage areas, appurtenances, animal inhabitation, and instrumentation monitoring. I explained to Mr. Snitker that the purpose of these frequent inspections is to identify and correct any conditions observed before they become potential or imminent issue that would require implementation of the CCR EAP.

Recent CCR impoundment documents posted to the Lansing CCR publicly available website since his last visit in 2017 that we reviewed included the Structural Stability Assessment (October 2017) and the Periodic Inspection Report (December 2017) that showed no issues of concern. We also reviewed the Groundwater Monitoring and Corrective Action Report (January 2018) that is ongoing.

We also discussed the annual CCR employee training provided annually to Lansing Generating Station employees including inspection requirements and methodology and the CCR EAP. The link to the CCR public website was also given to Mr. Snitker. The meeting concluded at 10:00 a.m.

A handwritten signature in blue ink, appearing to read "Jon Jackson".
